

Ink/Paste Dryer

Model DR100

The Model DR100 from Credence Engineering is the most compact Ink and Paste Dryer for framed tape available. Its unique multi-drawer design allows immediate drying of filled vias or circuit prints. The DR100 accepts framed tapes up to 8"X8". Each individual drawer is independently controlled to open on command, accept a framed tape and closed for the drying cycle.

Each drawer has LEDs to indicate its status. A green LED indicates that the drawer is ready for loading. A red LED indicates that a drawer is being processed. A blinking green LED indicates that a drawer cycle is complete and is ready to be opened. A blinking red LED indicates that the process time tolerance has been exceeded.

The DR100's internal re-circulating fan and filter provide clean dry air to drive off residual solvents in a controlled process.
